

ActiGraph provides validated, objective physical activity and sleep quality measurement solutions for your clinical trial.

ActiGraph's extensive line of highly validated actigraphy-based measurement devices and analysis software are used to objectively quantify physical activity levels and patterns, measure energy expenditure and steps taken, assess ambulatory function and evaluate sleep quality of human subjects in any environment. As part of a pharmaceutical or behavioral intervention study, ActiGraph measurement devices are sensitive enough to detect subtle changes in physical activity and sleep that may be overlooked through traditional, subjective self reporting.

ActiGraph monitors are compact, comfortable and non-invasive and can be worn 24-hours a day, even while bathing. All ActiGraph devices have an ambient light sensor, rechargeable lithium polymer battery, direct USB connection and enough on-board memory to store several weeks of subject data.

The ActiLife5 software is a powerful tool that makes it simple to analyze data collected by ActiGraph monitors. ActiLife features include:

- Multiple device initialization
- High speed downloads
- Wear time validation to screen for valid datasets
- Individual subject and batch data processing
- Data repository for comparison against standardized datasets including NHANES
- Data formatted for simple export into other programs
- Numerical and graphical data output options

ActiGraph has a validated, objective measurement solution to meet your research needs. Visit www.theactigraph.com or contact us directly at sales@theactigraph.com to learn more!

VISIT OUR RESEARCH DATABASE

ActiGraph is the leading provider of actigraphy-based activity and sleep monitoring solutions for the global research community. ActiGraph's comprehensive and extensively validated suite of hardware and software products are used by prominent academic and scientific organizations in 60 countries in studies involving activity, energy expenditure and their relation to various health issues, including obesity, diabetes, sleep disorders and aging.
